New York – June 7, 2017 – Altice USA, through its Altice Connects public affairs initiative, has teamed up with the City of Yonkers, New York to support the area’s next generation of science, technology, engineering and math (STEM) leaders and promote low-cost broadband accessibility. Altice USA, one of the largest broadband communications and video services providers in the United States, delivers Optimum-branded services in the New York metro area.

As part of this STEM initiative, several Altice USA employees mentored students from Cedar Place School in Yonkers about the role that STEM skills play in their careers at Altice USA and encouraged the students to design future technologies and innovations that the students would like to see come to fruition. The students later presented their designs and projects to an audience including Yonkers Mayor Mike Spano, Yonkers Councilman Michael Sabatino, and Yonkers Commissioner of Information Technology Bob Cacace. The event also raised awareness of Altice USA’s low-cost Optimum internet service, [Economy Internet](#), which provides affordable broadband access to families across the tri-state area.

“It is clear from the presentations that our Yonkers students have tremendous minds and imaginations, and it is critical that they have access to the tools and support to help them reach their full potential,” said Mike Spano, Mayor of the City of Yonkers. “The City of Yonkers is glad to have partnered with Altice USA both to raise awareness of affordable broadband as well as to inspire the youth in our community to pursue careers in STEM fields.”

“As a technology-focused company, Altice USA is committed to supporting the next generation of STEM leaders in the local communities we serve,” said Lee Schroeder, SVP of government and public affairs, Altice USA. “We are grateful to all those who lent their support to this great initiative – including our passionate Altice USA employee volunteers, Mayor Spano, and Cedar Place School – and look forward to continued efforts to promote STEM development and broadband accessibility.”
